

## **Environmental Policy**

EMS Security Group Limited is fully committed to environmental best practice throughout our business activities, wherever this is achievable. We recognise that the pursuit of economic growth and a healthy environment must be closely linked, and that ecological protection and sustainable development are collective responsibilities supported by governments, business, individuals and communities.

With this in mind we have in place an environmental programme and structure with defined responsibilities aimed at continuing improvement in our environmental performance, consistent with current knowledge and European Standard BS EN ISO 14001 (Current Issue).

We recognise that EMS business activity may impact upon the environment and EMS continues to work to prevent or minimise any potential harmful effects of our activities. We believe sound environmental practice is a key factor demonstrating effective corporate responsibility.

We educate and train our staff to act in an environmentally responsible manner in their business activities.

We conduct internal environmental reviews and evaluate the results. The reviews set targets and objectives to measure our performance to ensure that we are meeting our policy goals and complying with Environmental Legislation and Regulations.

We have established and continue to review a documentary system of procedures and work instructions, that ensures effective operational control of the Environmental Management System and regularly audit our performance.

We apply environmental best practice for the disposal of hazardous waste and normal waste, recycle rather than dispose of waste materials wherever possible. We also encourage our suppliers to adopt environmentally responsible attitudes and practices.

We will seek to minimise harmful emissions and pollution wherever practicable.

We will review our use of resources and reduce our consumption wherever possible.

A communication process has been established to inform both internal and external parties of environmental issues and information.

We constantly review our activities and seek to identify, plan for, and be prepared for any potential emergency situations to minimise impact upon the environment.
