

## Environmental Policy Statement

EMS Limited is fully committed to environmental best practice throughout our business activities and meeting requirements set by the UK government and Carrier. We recognise that the pursuit of economic growth and a healthy environment are closely linked and ecological protection and sustainable development are collective responsibilities supported by government, businesses, individuals and communities.

Our aims are:

- EMS business activity impacts upon the environment and we continue to work to prevent or minimise any potential harmful effects of our activities.
- We educate and train our staff to act in an environmentally responsible manner in their business activities and hope this influences their general way of life.
- Environmental reviews, reporting, monitoring targets and objectives to measure our performance ensuring that we are meeting Carrier's and legislative requirements.
- We apply environmental best practice for the disposal of all waste streams, recycling rather than landfill of waste materials wherever possible. We also encourage our suppliers to adopt environmentally responsible attitudes and practices.
- Regular review of our use of resources to reduce our consumption wherever possible.
- A communication process has been established to inform both internal and external parties of environmental issues and information.

We regularly review our activities seeking to identify, plan, test and be prepared for any potential emergency situations to minimise impact upon the environment.
